So basically, you use some data visualization tools like Tableau or Power BI or Adobe Analytics, make some pretty dashboards with your user data and make inferences. The target market, user sentiments, grouping data, survey data if you have any can be well summarized, etc.. The opportunity to leverage insight from data has never been greater.

In a world where analytics rules, design is becoming data-driven. Data forms the cornerstone of our product development process; it can quickly inform development priorities for enhanced user experience, improved user satisfaction and increased adoption rates. In order to keep up with the times, your designs need to be based on data.
