is a highly specialized field of application that places particular demands on engineering. This chapter discusses four parts of subsea engineering: production systems, flow assurance and system engineering, subsea structures and equipment, and subsea umbilicals, risers, and pipelines. A subsea production system consists of a subsea completed well, seabed wellhead, subsea production tree, subsea tie-in to flowline system, and ...

A submarine pipeline (also known as marine, subsea or offshore pipeline) is a pipeline that is laid on the seabed or below it inside a trench. In some cases, the pipeline is mostly on-land but in places it crosses water expanses, such as small seas, straits and rivers. Submarine pipelines are used primarily to carry oil or gas, but transportation of water is also important.
